ATA remains at the forefront integrating the latest graphics and 3-dimensional modeling programs and a 3D printer into our workflow to insure that all of our staff members can supply our clients with robust, accurate and visually stunning demonstrative and graphics support materials.

ATA Associates recognizes the need to do an accident investigation utilizing the proper scientific methodology combined with a cost effective process that can provide an accurate reconstruction of an accident if and when it is required. We call this process, "Back to Basics". Accident related information and evidence, such as accident site marks, vehicles, and electronic data can disappear quickly. Lost or incomplete data can complicate the ability to evaluate and accurately reconstruct an accident. This can lead to issues if litigation of the event occurs at a later time.
